

PROJECT NEEDS-WANTS-WISHES LIST

What are the key problems & issues you want addressed?

Regarding the spaces you want remodeled or added, how do you see the spaces being used:

Definitions:

- Needs: The highest priority of a client's list of work, is typically not influenced by unit price, and accomplishes the intent of the project.
- Wants: The second highest priority of work, is price sensitive, and can be completed later.
- Wishes: The lowest priority of work, is very price sensitive, and if not completed does not affect the overall intent of the project.

Example: I need a gas range and vent hood
I want a 36" professional gas range
I wish I could afford a \$10,000 wolf commercial 36" gas range
